Education

Montana Tech — Butte, MT

- *Bachelors of Science in Computer Science with Game Development Option* — *August 2015 - May 2019*
  Bachelors of Science in Software Engineering — *August 2015 - May 2019*

Summary

I am a seasoned full-stack developer of over five years. By leveraging NextJS, TailwindCSS, and PostgreSQL I am able to quickly create full-stack applications while targeting wide varieties of platforms with both reusability and scalability in mind.

Skills

- **Languages**: HTML (5+ years), CSS (5+ years), Javascript (5+ years), Typescript (3+ years), SQL (5+ years), C++ (5+ years)
- **Technologies**: NodeJS (5+ years), NextJS (1 year), React (3+ years), Django (1 years), Tailwind (1 year), AWS Cloudformation, AWS ECS, GCP, Azure, ElevenLabs, OpenAI, Git (5+ years), Perforce (2+ years), Latex, Adobe Premiere, Adobe Audition

Experience

- **Freelancer/Consultant** — Rexford, MT
  Content Creator Tooling Specialist — *Spring 2022 to Current*
  - **Website Design**: Created a NextJS application for ArcadiaSMP that leverages Google's YouTube api to aggregate videos uploads. Available at https://arcadia.yt.
  - **AI Technology**: Leveraged bleeding-edge AI technology such as ChatGPT, ElevenLabs, and Azure TTS to create interactive content tools.
  - **YouTube Content**: Additionally worked as a Content Creator making collaborative content on YouTube. I raised my Twitch account, HumbleHominid, to Affiliate status over the course of this time period.
- **Heavy Iron Studios Inc.** — Manhattan Beach, CA
  Associate Game Programmer — *October 2019 to July 2021*
  - **UI Development**: Worked closely with artists to make functional UI implementations based on art mock-ups.
  - **Unreal's Replication System**: Worked on extending our use of Unreal's replication graph to better enhance our network performance.
  - **Unreal Engine Patches**: I created multiple engine patches to address unimplemented, or partially implemented, features that were necessary for a full-game launch.
  - **Developer and Live Operations Portal**: Project lead on the Developer and Live Operations portal built in Django to assist with the live-service of Pac-Man: Mega Tunnel Battle. The purpose of the portal is twofold; to help with development and also serve as a post-launch customer support and live operations portal.
- **Butte Science Mine** — Butte, MT
  Software Engineer — *Summer 2017 and 2018*
  - **Description**: Developer tasked with creating an application to allow museum visitors to explore digital content that is pertinent to a specific exhibit.
  - **Emberjs**: Emberjs, a Javascript template framework, was used for the front-end.
  - **Vis.js**: Vis.js was used in conjunction with Ember to aid museum curators in editing complex model designs.

Projects - Available on GitHub

- **arcadia-website**: A NextJS application that leverages Google's YouTube api to aggregate videos uploads from members of ArcadiaSMP.
- **mfryer-nextjs**: The repository for my personal website. This website was built using Next.js and Tailwind and deployed via Vercel.
